CONTENTS

Aqueous Vapor Pressure of Soils: II. Studies in Dry Soils. MOYER D. THOMAS..... 1
Experiments with Bacterial Soil Fertilizing Preparations. I. A. MAKRINOFF..... 19
Is it Possible to Make a Bacterial Soil Preparation for Non-legume Crops? I. A. MAKRINOFF..... 31
Relative Availability of the Phosphorus of Raw Rock and Acid Phosphate in Soils. M. I. WOLKOFF..... 39
Oxidation of Ammonia and Nitrites by Microörganisms under Different Conditions. R. NAGAN GOWDA..... 57
The Effect of Soil Suspensions upon the Solubility of the Sulfate Radical in the System $Ca(OH)_2-CaSO_4-H_2O$. W. H. MACINTIRE AND W. M. SHAW..... 65
The Replacement of Soil Potassium. S. C. VANDECAVEYE..... 91
The Effect of Aeration upon the Development of Barley in a Heavy Clay Soil. R. V. ALLISON..... 97
The Stratigraphic Study of Peat Deposits. ALFRED P. DACHNOWSKI..... 107
Effect of Ignition at Various Temperatures upon Certain Physical Properties of Soils. GEORGE JOHN BOUYOUCOS..... 135
Microbiological Analysis of Soil as an Index of Soil Fertility: VII. Carbon Dioxide Evolution. SELMAN A. WAKSMAN AND ROBERT L. STARKEY..... 141
The Quantitative Determination of Nitrates in Soil. D. J. R. VAN WIJK..... 163
The Calcium Content of Soil in Relation to Absolute Reaction. C. O. SWANSON, P. L. GAINEY AND W. L. LATSHAW..... 181
"Auximones" and the Growth of the Green Plant. NORMAN ASHWELL CLARK AND EMERY M. ROLLER..... 193
The Effect of Different Kinds of Wood and of Wood Pulp Cellulose on Plant Growth. J. A. VILJOEN AND E. B. FRED..... 199
Easily Soluble Calcium of the Soil in Relation to Acidity and Returns from Liming. F. L. DULEY..... 213
Carbon Dioxide Production of Plant Roots as a Factor in the Feeding Power of Plants. F. W. PARKER..... 229
The Loss of Calcium Carbonate in Drainage Water as Affected by Different Chemical Fertilizers. F. W. MORSE..... 249
Adsorption and Absorption of Bases by Soils. CARLETON P. JONES..... 255
Microbiological Analysis of Soil as an Index of Soil Fertility: VIII. Decomposition of Cellulose. SELMAN A. WAKSMAN AND O. HEUKELEKIAN..... 275
Some Observations on the Decomposition of Organic Matter in Soils. ROBERT L. STARKEY..... 293
Sorghum as an Indicator of Available Soil-Nitrogen. R. M. PINCKNEY..... 315
Preliminary Note on the Distribution of Nitrates in Soil under Corn Culture. A. W. BLAIR AND A. L. PRINCE..... 323
Influences of Varying Ratios of Phosphoric Acid and Potash on Crop Yield and Nitrogen Recovery. A. W. BLAIR AND A. L. PRINCE..... 327
Nitrates and Nitrification in Field Soils. R. NAGAN GOWDA..... 333
Soil Variability as Determined by Statistical Methods. ARTHUR H. POST..... 343
The Available State. J. ALAN MURRAY..... 359
Influence of Organic Matter upon the Development of Fungi, Actinomycetes and Bacteria in the Soil. SELMAN A. WAKSMAN AND ROBERT L. STARKEY..... 373

Microbiological Analysis of Soil as an Index of Soil Fertility. IX. Nitrogen Fixation and Mannite Decomposition. SELMAN A. WAKSMAN AND P. D. KARUNAKAR..... 379
Alkali Soil Investigations: I. A Consideration of Some Colloidal Phenomena. J. S. JOFFE and H. C. MCLEAN..... 395
The Importance of Hydrogen-Ion Control in Physico-Chemical Studies of Heavy Soils. RICHARD BRADFIELD..... 411
Abstracts of Some Papers on Soils and Plant Physiology Presented or Published in 1923.. 423
The Effect of Several Mineral Fertilizers Upon the Nodulation of Virginia Soy Beans. ALFRED T. PERKINS..... 439
A Note on the Nodulation of Soy Beans. ALFRED T. PERKINS..... 449
The Value of Soil Analysis When Limited to an Intensive Single Cropping System. W. T. MCGEORGE..... 457
The Influence of Silica, Lime and Soil Reaction upon the Availability of Phosphates in Highly Ferruginous Soils. W. T. MCGEORGE..... 463
A Statistical Study of the Distribution of Soil Material in the United States According to the Size of its Particles. D. S. JENNINGS..... 469
The Action of Dicyandiamid and Guanyl Urea Sulfate on Plant Growth. ALBERT F. MCGUINN..... 487

ILLUSTRATIONS

PLATES

Experiments with Bacterial Soil Fertilizing Preparations

Plate 1. Fig. 1. A typical root of vetch from a plot, fertilized with minerals without nitrates and inoculated with nodule bacteria 29
2. A typical root of clover from a plot, fertilized with minerals without nitrates and inoculated with nodule bäetcria 29
3. A typical root of vetch where nitrates were used; no nodules are present even though the plots were well inoculated 29
4. A typical root of clover, where nitrates were used; no nodules are present, even though the plots were well inoculated 29

Is It Possible to Make a Bacterial Soil Preparation for Non-legume Crops?

Plate 1. Fig. 1. Bacterial soil preparations 37
2. Bacterial soil preparations 37
3. Bacterial soil preparations 38

The Effect of Aeration upon the Development of Barley in a Heavy Clay Soil

Plate 1. Fig. 1. Barley in heavy clay soil cultures 105
2. Barley in heavy clay soil cultures 105

The Stratigraphic Study of Peat Deposits

Plate 1. Fig. 1. Brown, compact, plastic, coarsely divided, pulpy peat of sedimentary origin 125
2. Finely divided colloidal peat which hardened and cracked upon drying; it possesses conchoidal fracture and breaks into angular fragments .. 125
3. Brown, coarsely divided, pulpy peat with an admixture of fibrous plant remains from reeds 125
4. Surface view of black, friable, pulpy peat with shells 125
5. Gray brown pulpy peat with portions of reed plants infiltrated with iron—surface view 125
6. Surface view of brown Hypnum peat 125
7. Black, friable, sedimentary peat with marl from shells—side view 125
8. Dark brown, sedimentary, peat containing nodular concretions of iron—side view 125
9. Brown finely fibered Hypnum peat on gray silt—side view, showing well-marked line of separation between organic material and mineral subsoil 125
Plate 2. Fig. 1. Light brown, coarse, fibrous reed peat 127
2. Dark brown, finely-fibered, felty sedge peat 127
3. Brown, porous, matted coarsely-fibered reed peat 127
Plate 3. Fig. 1. Brown, loose, coarsely fibered sedge peat—cross section of a layer floating as a mat near the margin of a pond 129
2. Gray-brown, loose coarsely fibered sphagnum peat—side view of a section cut from a surface layer 129

Plate 4. Gray-brown fibrous sphagnum peat resting on a layer of finely-fibered, dark brown compact sedge peat; the woody material in the horizons at *a* and *b* is derived from heath shrubs growing as a surface vegetation—side view of a cross section cut from the surface 131
Plate 5. Fig. 1. Dark brown, loose forest peat containing varying amounts of coarsely fragmented woody material, root fibers, and well disintegrated granular debris—side view of a cross section cut from the surface layer 133
2. Brass instrument used for profile soundings of peat deposits 133
3. Brass plunger, withdrawn from the brass cylinder to show spring with catch which locks the instrument at any desired depth. The cylinder, when filled with peat, protects the sample from any contamination with other material 133

THE EFFECT OF DIFFERENT KINDS OF WOOD AND OF WOOD PULP CELLULOSE ON PLANT GROWTH

Plate 1. Fig. 1. The effect of birch on oats 209
2. The effect of willow on oats 209
Plate 2. Fig. 1. The effect of alder on oats 210
2. The effect of poplar on oats 210
Plate 3. The effect of various kinds of wood on the growth of oats 211

INFLUENCE OF VARYING RATIOS OF PHOSPHORIC ACID AND POTASH ON CROP YIELD AND NITROGEN RECOVERY

Plate 1. Nitrate of soda with single and double portion of potash 331

TEXT-FIGURES

AQUEOUS VAPOR PRESSURE OF SOILS: II. STUDIES IN DRY SOILS

Fig. 1. Mechanical composition of the soils 5
2. Vapor pressure data: chart A, Gardner's separates; chart B, Trenton clay and Millville soils 7
3. Vapor pressure data for the diverse group of soils 10

RELATIVE AVAILABILITY OF THE PHOSPHORUS OF RAW ROCK AND ACID PHOSPHATE IN SOILS

Fig. 1. Effect of time of reaction and the amount of phosphorus present on the per cent of phosphorus recovery from brown silt loam 48
2. Effect of time of reaction and the amount of phosphorus present on the per cent of phosphorus recovery from black clay loam 49
3. Effect of time of reaction and the amount of phosphorus present on per cent of phosphorus recovery from quartz sand 50
4. Effect of moisture content in brown silt loam on the per cent of phosphorus recovery from 25 mgm. of this soil, treated with 4 mgm. of phosphorus in either rock phosphate or in double acid phosphate; 0.2 *N* HNO_3 was used for extraction 51
5. Effect of temperature on the amount of phosphorus extracted from 25 gm. of brown silt loam, treated with 4 or 8 mgm. of phosphorus in the form of either rock or acid phosphate 51

OXIDATION OF AMMONIA AND NITRITES BY MICROORGANISMS UNDER DIFFERENT CONDITIONS

Fig. 1. Diagram of tube arranged for oxidation of ammonium sulfate 61

THE EFFECT OF AERATION UPON THE DEVELOPMENT OF BARLEY IN A HEAVY CLAY SOIL

Fig. 1. Type and construction of culture vessel used 99
2. Comparative effect of aeration and constant drip upon the development of barley in a heavy clay soil 102

THE STRATIGRAPHIC STUDY OF PEAT DEPOSITS

Fig. 1. Graphic presentation of the development of a peat deposit 121
2. Generalized cross-sections to show series of the more common type profiles in the two groups of water-laid and land-laid peat deposits 122

MICROBIOLOGICAL ANALYSIS OF SOIL AS AN INDEX OF SOIL FERTILITY: VII. CARBON DIOXIDE EVOLUTION

Fig. 1. Small apparatus for determining the decomposing power of soils 147
2. Course of carbon dioxide production from dextrose added to soils of different fertility 155
3. Evolution of carbon dioxide from fresh soils of different fertility without further treatment (I); and in presence of 0.2 per cent alfalfa meal (II) 156
4. Correlation between microbiological activities and crop yields 157

"AUXIMONES" AND THE GROWTH OF THE GEEEN PLANT

Fig. 1–3. Reproduction of *Lemna* in three-salt and soil solutions 196
4–5. Reproduction of *Lemna* in Detmer's solution 196

CARBON DIOXIDE PRODUCTION OF PLANT ROOTS AS A FACTOR IN THE FEEDING POWER OF PLANTS

Fig. 1. Percentage of carbon dioxide in the soil air of cultures of different plants 236
2. Grams of carbon dioxide given off by the roots of different plants during successive 3-day periods 241

ADSORPTION AND ABSORPTION OF BASES BY SOILS

Fig. 1. Graph showing the degree or velocity of the reaction between a soil and carbonate of lime as influenced by the fineness of the carbonate 266

MICROBIOLOGICAL ANALYSIS OF SOIL AS AN INDEX OF SOIL FERTILITY: VIII. DECOMPOSITION OF CELLULOSE

Fig. 1. Influence on $NaNO_2$ upon the course of decomposition of cellulose as indicated by the evolution of carbon dioxide 288

SOME OBSERVATIONS ON THE DECOMPOSITION OF ORGANIC MATTER IN SOILS

Fig. 1. Courses of decomposition of some organic materials in soil 299
2. Effects of nitrate on the courses of decomposition of rye straw and alfalfa meal ... 302
3. Effects of nitrate on the courses of decomposition of cellulose in soils of different fertility 307
4. Courses of decomposition of rye straw in soils of different fertility 308
5. Courses of decomposition of dried blood in soils of different fertility 309

NITRATES AND NITRIFICATION IN FIELD SOILS

Fig. 1. Increase in nitrates, nitrifying power and corn yield due to treatment 340

SOIL VARIABILITY AS DETERMINED BY STATISTICAL METHODS

Fig. 1. Dimensions and location of borings on plots sampled 344
2. Probable errors calculated for varying numbers of samples 352

3. Showing the soil variability when four determinations were averaged for each quarter 354
4. Showing the soil variability when six determinations were averaged for each quarter 355

THE AVAILABLE STATE

Fig. 1. Curve shows the amount of crop corresponding to the quantity of available P_2O_5 in the soil and the increase produced by each unit of fertilizer applied 361
2. The curve illustrates the increase in total surface due to fine subdivision of particles. The region of the bend probably corresponds to a critical stage between the available and non-available states 367

MICROBIOLOGICAL ANALYSIS OF SOIL AS AN INDEX OF SOIL FERTILITY. IX. NITROGEN FIXATION AND MANNITE DECOMPOSITION

Fig. 1. Course of mannite decomposition in soils of different fertility 388
2. Influence of addition of soluble phosphate and lime to a fertile acid soil upon its mannite-decomposing power 389
3. Influence of addition of soluble phosphate and lime to an infertile acid soil upon its mannite-decomposing power 390

ALKALI SOIL INVESTIGATIONS: I. A CONSIDERATION OF SOME COLLOIDAL PHENOMENA

Fig. 1. Curves showing rise of capillary water in first series after 14 days' incubation 399
2. Curves showing rise of capillary water in first series after 95 days' incubation ... 399

THE IMPORTANCE OF HYDROGEN-ION CONCENTRATION CONTROL IN PHYSICO-CHEMICAL STUDIES OF HEAVY SOILS

Fig. 1. The effect of H-ion concentration upon the flocculation of an acid and a neutral colloidal clay 413
2. The effect of the concentration of an acid colloidal clay upon the minimum electrolyte requirement with potassium mixtures at different pH values 415
3. The effect of the hydrogen-ion concentration upon, the amount of potassium absorbed by 1 gram of an acid colloidal clay from 0.1 *N* potassium mixtures ... 416
4. The effect of the hydrogen-ion concentration upon the liberation of Al_2O_3, Fe_2O_3 and SiO_2 from an acid colloidal clay by 0.1 *N* potassium mixtures 417
5. The effect of the hydrogen-ion concentration upon the liberation of CaO and MgO from 1 gram of an acid colloidal clay by 0.1 *N* potassium mixtures 418
6. The effect of the hydrogen-ion concentration upon the total bases liberated or absorbed by an acid colloidal clay by 0.1 *N* potassium mixtures 419

A STATISTICAL STUDY OF THE DISTRIBUTION OF SOIL MATERIAL IN THE UNITED STATES ACCORDING TO THE SIZE OF ITS PARTICLES

Fig. 1. Size distribution curves for thirteen soil provinces 473
2. Standard deviations for the seven separates 476
3. Deviations from "general mean" for separates 1, 2 and 3 477
4. Deviations from general mean for separates 4, 5, 6 and 7 477
5. Average composition of soil material as analyzed in connection with the soil survey 478
